Date	15 September 2024
Team ID	739698
Project Title	Strain analysis based on eye blinking
Maximum Marks	6 Marks

Preprocessing Template

The images will be preprocessed by resizing, normalizing, augmenting, denoising, adjusting contrast, detecting edges, converting color space, cropping, batch normalizing, and whitening data. These steps will enhance data quality, promote model generalization, and improve convergence during neural network training, ensuring robust and efficient performance across various computer vision tasks.

Resizing	<pre>frame = imutils.resize(frame, width=450) gray = cv2.cvtColor(frame, cv2.COLOR_BGR2GRAY) rects = detector(gray, 0) for rect in rects: shape = predictor(gray, rect) if shape is None: print("shape predictor returning none") continue</pre>
Color Space Conversion	<pre>90 91 while True: 92 if fileStream and not vs.more(): 93 break 94 95 frame = vs.read() 96 frame = imutils.resize(frame, width=450) 97 gray = cv2.cvtColor(frame, cv2.COLOR_BGR2GRAY) 98</pre>
